Academic Projects

Title : **BarterBrains**

Platform : Java,C#,.NET Core Web API,Entity Framework,Spring Boot REST API,Microservices,React JS,MySQL,GitHub **Duration** : 1 Month

Description : BarterBrain is a skill-sharing and learning platform that allows users to teach and learn skills by booking sessions using a point-based barter system instead of money. Users can create profiles, add skills under different categories, and schedule learning or skill-swap sessions. Learners can view available sessions, book them, and complete the learning process through teacher and learner confirmations along with feedback. The system also manages point rewards for teaching and learning activities to ensure fair and transparent skill exchange. The application is designed using a microservices approach, where user and skill management, session and booking management, and point transactions are handled as separate services, making the system more modular, scalable, and easier to maintain.

Title : **Adsorption Technique of Filtration for Phosphate Removal**

Platform : UV-VIS Spectrophotometer **Duration** : 6 Months

Description : This project studies the use of adsorption-based filtration to remove phosphate from municipal wastewater. Two low-cost adsorbentsregenerated activated carbon and sawdustare tested to compare their efficiency. Wastewater samples are passed through filters containing each adsorbent, and the remaining phosphate concentration is measured using a UV-VIS Spectrophotometer. The study evaluates which material removes phosphate more effectively and aims to develop a cost-efficient, eco-friendly method for wastewater treatment.
